UX architect and design leader with 20 years in design and 10+ in product UX, shaping complex healthcare SaaS and financial products. I define experience architecture, workflows, and shared systems while staying close to delivery. My focus is making UX work that sticks: simplifying legacy platforms, connecting complex workflows, and building systems teams can actually use.

EXPERIENCE

AdvancedMD | UX Architect *Dec 2025 – Present*

- Set experience architecture across the product organization while remaining a hands-on design partner to six development teams.
- Helped define a new product offering, translating client research, behavioral data, and feedback into role-based workflows and navigation that unify Practice Management and EHR for smaller practices.
- Architected the UX path out of a heavily customized Angular Material library that blocked upgrades beyond Angular 18, establishing standard Material 3 as the default, with custom components only where product requirements demand them, reducing security risk and unblocking upgrades.
- Established shared component guidance across Figma, documentation, and AI-assisted development so Design and Engineering work from the same definitions instead of recreating patterns team by team.
- Built a RAG-optimized UX research library with Claude that makes years of customer research retrievable across studies, roles, workflows, and product areas—turning fragmented research into shared product knowledge.
- Authored the UX1–UX6 career framework, creating shared expectations for design roles and growth across the UX organization.

AdvancedMD | Senior Manager, User Experience *Jun 2022 – Dec 2025*

- Led UX across a complex healthcare SaaS platform, establishing shared research, accessibility, and design-system practices while supporting delivery across patient, clinical, and financial workflows.
- Directed research and design across patient management, billing and transactions, collections/RCM, scheduling, payments, worklists, and platform modernization.
- Partnered with Product, Engineering, and QA to translate customer needs, regulatory requirements, and technical constraints into buildable workflows while mentoring designers from discovery through delivery.

PatientPop / Tebra | Senior UX Researcher & Designer *Jan 2021 – May 2022*

- Led research and design for PatientPop Connect, combining SMS, web chat, and IVR; co-built and field-tested an Auto Attendant that moves patient calls to text.
- Designed a three-step self-service activation experience and used practice rollouts as structured research, feeding real-world workflow findings back into product iteration.

Morgan Stanley | Senior UX Designer *Jul 2019 – Jan 2021*

- Designed across Shareworks and the Advanced-HR compensation suite, simplifying complex compensation and employee-data workflows ahead of Advanced-HR's sale to Pave.
- Co-led discovery with venture capital firms that reframed a new private-markets product opportunity from cap-table storage to portfolio valuation and quarterly fund reporting.
- Ran usability research on Option Driver's data-upload workflow to identify friction in how HR teams update employee and compensation data.

AdvancedMD | Senior UX Designer *Nov 2016 – Jul 2019*

- Designed and researched healthcare workflows across the EHR/PM platform and contributed to the foundations of a shared product design system.

SKILLS

Experience Architecture • Enterprise Workflow Design • Product Strategy • Design Systems & Governance • UX Research & Synthesis • Service Mapping • Research Architecture • AI-Enabled UX Operations • Accessibility / WCAG • Team Leadership

Tools: Figma • Claude • Angular Material • Pendo • Aha! • Adobe Creative Cloud

EDUCATION & AWARDS

Utah Valley University — AAS, Graphic Design

Springboard — UX Design Workshop

EHR Innovation Award — MedTech Breakthrough Awards, 2018
